Planning the Location of the Vipros 255

The following diagrams provide the details for positioning the Vipros 255.

- No obstacles are allowed in the worksheet travel area and the ceiling must be at least 40" above the Vipros 255.
- All of the recommended maintenance areas should be used, but at a minimum the doors of the NC unit must be able to be opened. Any reduction of the listed maintenance areas may increase time and expense of installation and maintenance.
- The Vipros 255 machine and control must be protected from direct sunlight or other heat sources. Direct exposure to direct heating sources such as infrared heaters have been shown to affect punch and die alignment.
- The positioning of the SBC EX3.0 Chiller is very flexible

Chiller Placement

The chiller location is flexible and position shown is for reference only.
 Under normal operation the chiller may be placed against walls as shown. For maintenance access to all sides may be required.
